

Flexi Tank

Volume Conversion Chart

When calculating tank sizes this chart may be helpful. Its important to note that US made tank volumes are US Gallons which are smaller than UK Gallons. Australia used to use UK Gallons prior to metrification.

When we sell our products in Australia, it's important to note that we are obligated by law to quote the volume in metric measurements. This is done to avoid the problem of consumer / customer comparison errors or deceptions.

Green shaded areas are standard tank sizes without Heli Collars.

Blue shaded areas are standard tank sizes with Heli Collars.

Any size tank above 3000 litre can be fitted with a Heli Collar. Other tank sizes are available; please let us know what you need.
